

Project Initialization and Planning Phase

Date	02 July 2024
Team ID	SWTID-2026-9778
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

A Credit Card Approval Prediction System helps financial institutions automatically evaluate credit card applications based on customer details such as income, employment status, credit score, loan history, age, and financial behavior. This reduces manual effort, improves accuracy, minimizes fraudulent approvals, and speeds up the decision-making process while providing a better customer experience..

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card.	Obtain quick approval for a credit card application.	My eligibility depends on multiple financial and personal factors that are difficult to assess manually.	Banks evaluate income, employment status, credit history, debt ratio, and repayment behavior before approving applications.	Confident that an intelligent prediction system can provide a faster, fair, and accurate approval decision.
